

# Introduction to leadership and Management Process

- Provide Participants with Knowledge, Skills And & Positive Attitude Toward Introduction to leadership and Management Process

# OBJECTIVE

TEXTSTUDIO

At the end of this lecture, all participants will be able to:

- Define key terms.
- Differentiate between administration and management.
- List Management levels.
- Apply Management process.

# outline

- ☐ Definition of administration ,management, Nursing management.
- ☐ Difference between administration and management in nursing.
- ☐ Difference between administrator & manager.
- ☐ Management levels (positions)
- ☐ Management process

# Definition of key terms

- **Administration:**
- It is the process concerned with determining goals, objectives, policies and plans for which the organization and its management operates.
- So, administration is more comprehensive and includes activities of setting goals, philosophy, formulating policies as well as managing personnel and materials. Administration activities carried out by those at the top level of the organization.

- **Management:**

- It is a social; and technical process that utilizes resources and facilities and influences human actions in order to accomplish an organization's goals.
- Management provides means of translating administrative philosophy, goals and plans into actuality by using the available resources and by controlling personnel's activities. Management activities carried out by those at the middle and first levels of the organization.

- **Nursing management:**

- **It is the process of working through nursing staff to provide care, cure and comfort to the clients. (patients).**

# Difference between Administration and Management in Nursing

| Basis of difference | Administration                                                                                      | Management                                                                         |
|---------------------|-----------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------|
| Nature of work      | It is concerned about the determination of objectives and major policies of an organization.        | It puts into action the policies and plans laid down by the administration.        |
| Type of function    | It is a determinative function.                                                                     | It is an executive function.                                                       |
| Scope               | It takes major decisions of an organization as a whole.                                             | It takes decisions within the framework set by the administration.                 |
| Level of authority  | It is a top-level activity.                                                                         | It is a middle level activity.                                                     |
| Nature of usage     | It is popular with government, military, educational, and religious organizations.                  | It is used in business organizations                                               |
| Decision making     | Its decisions are influenced by public opinion, government policies, social, and religious factors. | Its decisions are influenced by the values, opinions, and beliefs of the managers. |
| Main functions      | Planning and organizing functions are involved in it.                                               | Motivating and controlling functions are involved in it.                           |
| Abilities           | It needs administrative rather than technical abilities.                                            | It requires both abilities                                                         |

# Difference between Administrator & Manager

| Basis of difference    | Administrator                                                                                                                 | Manager                                                                                                                                                                 |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Definition             | Administrator is the person who is responsible for forming the strategic vision of the organization (top-level of hierarchy). | Manager is the person who is responsible for translating the administration's vision into operating plans and acting in the middle- and first-line levels of hierarchy. |
| Activities & authority | To formulate organizational structure.                                                                                        | To direct, supervise personnel working in the formulated organizational structure.                                                                                      |
| Events                 | Inside and outside the organization and how it affects work.                                                                  | Inside the unit (s)                                                                                                                                                     |
| Plan                   | long term plans                                                                                                               | short term plans                                                                                                                                                        |
| Definition             | Mission, philosophy, goals, and policies                                                                                      | Goals and objectives governing the                                                                                                                                      |

# Management levels (positions):

- **Top level managers.**

Are those managers who make major decisions affecting the present and the future of the health organization. They focus on personal growth and development of middle and first level managers. They give the organization its general direction, they decide where it is going and how it will get there. e.g. **director of nursing service**

- **Middle level manager.**

Are those responsible for first line managers rather than direct responsibility for staff nurses. They serve as the link between the top and first level. They carry goals, policies, and purposes downward to first level managers, and monitor information up to the top-level managers. e.g. **supervisors.**

- **First level manager.**

It indicates a management position that is one step above the nursing staff. In nursing, the first level managers are by head nurses, charge nurses and team leaders. The primary responsibility of the first level manager is the production of desired nursing care. They concerned with materials necessary for completion of the work and the systems that regulate and turn out the work.

# Management process:

- Organization can achieve its objectives through management process. Management process composed of a series of interrelated elements. These elements are planning, organizing, assembling resources, directing, and controlling.

# Planning

- Provide Participants with Knowledge, Skills And & Positive Attitude Toward planning as a management function.

# OBJECTIVE

TEXTSTUDIO

- At the end of this lecture, all participants will be able to:

1. Define key terms.
2. Discuss importance of planning.
3. Identify types of planning.
4. Recognize characteristics of effective plan.
5. Apply steps of planning.
6. Differentiate between planning tools.
7. Develop positive attitude toward planning as a management function.

# outline

# Planning

- **It is the process of deciding in advance what should be done, how, when, where and by whom it will be done.**
- **It is the basic management function that predetermines what will be done, when, how, and by whom. It is an intellectual process that determines the goals of an organization and develops the various ways in which the organization can achieve those goals. Record exactly how to achieve a goal.**

## **Importance of planning**

- 1. It leads to success in achieving goals and objectives.**
- 2. It gives meaning to work.**
- 3. It provides for effective utilization of available personnel and facilities.**
- 4. It helps in coping with crisis situations.**
- 5. It is cost effective.**
- 6. It is based on past and future, thus helping reduce the element of change.**
- 7. It can be used to discover the need for change.**
- 8. It is needed for effective control.**

# Types of plan

## Types of plans

### Strategic plan

It is a long-term plan

**(5-10 years)**

includes the overall  
organizational goals &  
objectives

### Tactical plan

It is concerned with the  
implementation of the  
strategic plan

**(1-3 years)**

### Operational plan

**Day-to-day Plan**

Directed towards the  
fulfillment of unit  
objectives

## **Strategic plan: (Top level management plan)**

**It is a long-term plan and includes the development of overall organizational goals and objectives taking into consideration external environmental factors that affect the operations on a long-term basis (5-10 years).**

## Tactical plan: (Middle level management plan)

- **It is concerned with the implementation of the strategic plan. It is usually encompassing (1-3 years). They are more specific & concrete than strategic plans.**

## **Operational plan: (First level management plan)**

**It is concerned with the efficient, day-to-day use of resources allocated to the unit and directed towards the fulfillment of unit objectives.**

## **Characteristics of an effective plan. The effective plan should**

- 1. Be made on clearly defined objectives.**
- 2. Be logical, simple, clear and balanced.**
- 3. Have stability while providing for flexibility.**
- 4. It is essential to meet emergencies or changing situations.**
- 5. Be realistic and economical (use available resources).**
- 6. Anticipates and forecast the future.**

# Steps of planning

# Planning tools and Hierarchy:

# Cont.

## **Vision:**

**It is a mental image or the power of imagination to see something that is not actually visible. It is an image without great details.**

## **Values:**

**It is the worth, usefulness, or importance of something. Core values are things do not change. Values drive how people truly act in organization.**

## **Mission:**

**It is brief statement for identifying the reason that an organization exist as well as its future aim or function. It is different from organization to another.**

# Cont.

- **Philosophy:**

**It is a statement of beliefs, values, attitudes, principles and concepts that provides personnel with a common and consistent sense of action?**

- **Purposes of philosophy:**

- 1. It provides the basic beliefs, values and principles.**
- 2. It tells personnel how they should act.**
- 3. It explains why personnel should direct their energies towards the achievement or accomplishment of the specific objectives.**

Cont.

### **Nursing service department philosophy:**

**It is a written statement of philosophy that states how nurse managers believe that the purpose will be achieved.**

**Nursing philosophy consists of beliefs about person, environment, life, health, illness, nurse-patient relationship and nursing care. It is derived from the hospital philosophy.**

Cont.

- **Goals:**

**It is a general statement for giving direction for what the organization seeks to accomplish (desired outcome).**

**Objectives:**

**It is a specific measurable action indicating what is to be done by an individual employee?**

Cont.

**Objectives should be SMART:**

**Specific & Simple**

**Measurable**

**Applicable**

**Relevant & determining who is responsible  
for achieving it.**

**Timed (has timelines).**

# Cont.

## **Policies:**

**It is a general statement that has been formalized by administrative authority to guide actions in accomplishing the objectives of the organization.**

## **Purposes of policies:**

- 1. Provide information for decision-making.**
- 2. Aid in solving recurrent problems.**
- 3. Create standard-operating procedures among organizational units.**
- 4. Promote efficiency, safety and consistency in accomplishing tasks, i.e. policy manual.**
- 5. Guide in performance evaluation.**

## **Sources of policies:**

**Policies are established through extensive consultation and derived from several sources:**

- 1. Philosophy of the organization and its desired objectives.**
- 2. Top level management.**
- 3. Middle level management (assistant directors and supervisory personnel).**
- 4. Externally imposed policy such as government control (outside the organization).**

# **Types of policies**

- 1. Personnel policies.**
- 2. Departmental policies (regulations).**
- 3. Financial policies.**

# 1. Personnel policies:

Are concerned with all the hospital personnel and include:

- Personnel employment policies e.g. hiring new employees, promotion of the present employees, Termination of present employees and retirement.
- Arrangement of work e.g. hours of work. Vacations, holidays, sick leaves and absence and working conditions.
- Employees services e.g. health care programs, social and recreational activities, safety programs, health insurance, pension, housing and Reward and compensation policy.
- Training policy: e.g. purpose of training, type of training needed, time and place for the conduction of training, authorized scope of training program, and administration and scheduling of the training program.

## **Advantages of personnel policies:**

- 1. Useful in the orientation of the employees.**
- 2. Save time & efforts of the employees as well as administrators.**
- 3. Provide employees with information that help them to provide high quality service and to remain with the organization.**
- 4. Give employees a sense of security and individual worth.**
- 5. Give employees pride in and loyalty to the organization.**

## 2. Departmental policies (regulations):

Are specific personnel policies that are applied only to a specific department or individual positions, e.g. **nursing service policies manual?**

## **Nursing service department policies manual:**

**This manual can be developed for overall departmental policies, procedures and information related to nursing administration and professional components of nursing care. It may:**

- 1. Describe the structure, function and organization of the nursing department.**
- 2. Identify current departmental administrative and clinical nursing practice, policies and procedures that are applicable to nursing department.**
- 3. Duty hours and its rotation.**
- 4. Reporting & recording system applied.**
- 5. Type of uniforms.**
- 6. Staff education.**
- 7. Identify current hospital and medical staff policies and procedures related specifically to nursing.**

### 3. Financial policies:

Are concerned with all the hospital finance (money), and include:

- Sources of capital budget.
- Uses of capital budget.
- Protection of capital budget.
- Distribution of earnings.

# **Principles to be considered in formulating policies:**

- 1. Policies should be stated in written form.**
- 2. The policy statement should be definite, positive, clear, and available and understood to everyone in the organization.**
- 3. Policies should be fair and unbiased.**
- 4. The purpose of the policy should be clear and briefly expressed.**
- 5. Policies must be realistic and based on facts in order to be effective.**
- 6. Policies should be flexible enough to meet future changes.**
- 7. The duties and responsibilities of each individual affected by the policy should be completely outlined.**
- 8. Policies should be communicated to those affected.**
- 9. Policies should be revised periodically.**

## Cont. Planning tools and Hierarchy

- **Procedures:-**

**Are series of steps in a chronological sequence of required action, they describe in detail the exact manner in which certain activities or actions must be accomplished, e.g. procedure would prescribe the manner of applying vocation to avoid interruption of work.**

**It includes the following:**

- 1. Statement of objective.**
- 2. Determination of who is going to perform the activity.**
- 3. Supplies and equipment required.**
- 4. Methods of communication.**
- 5. Criteria for performance.**

Cont.

### **Advantages of Procedures:- :**

**Written procedures promote efficiency, safety and consistency in accomplishing tasks.**

### **Rules:**

**Statements that describe specific action taken or not to be taken with respect to the situation, e.g., no smoking is allowed in the room where oxygen is being administered.**

# Problem Solving

**Provide Participants with Knowledge, Skills And & Positive Attitude Toward Problem Solving.**

# OBJECTIVE

TEXTSTUDIO

- At the end of this lecture, all participants will be able to:
  1. Define key terms.
  2. Discuss Types of managerial problems.
  3. Identify Type of problems and decisions.
  4. Recognize Problem solving methods.
  5. Apply Problem solving process.
  6. Develop positive attitude toward Problem solving process.

# outline

- **Definition of Problem solving**
- **Types of managerial problems**
- **Type of problems and decisions**
- **Problem solving methods**
- **Problem solving process**
- **Problem solving techniques**

# Problem solving :

- Is the manager's responsibility, not only to identify the nature and extent of the problem, but also to decide the method to be used in dealing with each problem and instruct and direct subordinate in use of that method.

## Types of managerial problems:

- Structured problems
- Unstructured problems.
- Crises problems.

## Type of problems and decisions:

# Cont.

## 1- Well-structured problems and programmed decisions:

- Some problems are straightforward, familiar, and easily defined problems. The goal of the decision maker is clear, the problem is familiar, and information about the problem is easily defined and complete.
- This type of problems needs: Programmed decisions: A repetitive decision that can be handled by a routine approach.

## 2- Poorly structured problems and non-programmed decisions:

**Poorly Structured Problems:** Problems that are new or unusual and for which information is ambiguous or incomplete.

- This type of problems needs: Non-Programmed Decisions: A unique decision that requires a custom-made solution.

# **Problem solving methods:**

## **1- Trial and error method:**

**Manager is applying one solution after another until the problem is solved or appears to be improved.**

## **2-Scientific experimentation:**

**Scientific experimentation is a process by which selected elements of situation are studied under highly controlled conditions.**

## **3-Novel solution or interventions:**

**In this method the nurse manager invent solutions for which she has no prototype previous recorded memory.**

# Problem solving process:

# **Problem solving techniques:**

- 1. Brain storming.**
- 2. Cause and effect.**
- 3. Check sheets.**
- 4. Pareto analysis.**
- 5. Process flow chart.**

# Cont.

- **Brainstorming**

A simple method where a group shares ideas freely to solve a problem or generate new ideas.

# Cont.

- **Cause and Effect (Fishbone Diagram)**

A tool used to identify the main causes of a problem by showing the relationship between causes and the effect.

# Cont.

- **Check Sheets**

A structured form used to collect and record data in an easy and organized way.

| CHECK SHEET - DAILY REJECTION MONITORING |             |                     |    |    |    |        |    |    |       |
|------------------------------------------|-------------|---------------------|----|----|----|--------|----|----|-------|
| PART NAME :                              |             | PART NO. :          |    |    |    | MODEL: |    |    |       |
| S.<br>NO.                                | DEFECT      | Date wise Rejection |    |    |    |        |    |    | Total |
|                                          |             | 1                   | 2  | 3  | 4  | 5      | 6  | 7  |       |
| 1                                        | Blow Hole   | 15                  | 12 | 10 | 13 | 11     | 8  | 10 | 79    |
| 2                                        | Non filling | 5                   | 10 | 8  | 2  | 5      | 6  | 4  | 40    |
| 3                                        | Catching    | 8                   | 5  | 8  | 5  | 7      | 9  | 6  | 48    |
| 4                                        | Carbon      | 12                  | 11 | 8  | 6  | 4      | 8  | 9  | 58    |
| 5                                        | Crack       | 9                   | 13 | 10 | 8  | 11     | 5  | 7  | 63    |
| Total                                    |             | 49                  | 51 | 44 | 34 | 38     | 36 | 36 |       |

# Cont.

- **Pareto Analysis**

A technique used to identify the most important causes of a problem, based on the idea that a few causes create most of the effects.

Cont.

- **Process Flow Chart**

A visual diagram that shows the steps of a process from start to finish.

## Process ~ Flowchart

# Decision Making

- **Provide Participants with Knowledge, Skills And & Positive Attitude Toward Decision Making .**

# OBJECTIVE

TEXTSTUDIO

- At the end of this lecture, all participants will be able to:
  1. Define key terms.
  2. The purpose of decision making.
  3. Identify Factors affecting decision making.
  4. Apply Decision making styles.
  5. Develop positive attitude toward Decision making process.

# outline

- **Definitions**
- **The purpose of decision making**
- **Decision making process**
- **Factors affecting decision making**
- **Decision making styles**

# Definitions

- **Decision:** A choice from two or more alternatives.
- **Problem:** A discrepancy between an existing and a desired state of affairs.
- **Decision Making Process:**

A set of eight steps including identifying a problem, selecting an alternative, and evaluating the decision's effectiveness. Decision making is one subset of problem solving.

- **Decision making:**

is a vital component of problem solving. It is a behavior, the critical mental action that is taken.

# The purpose of decision making:

- To choose the best possible option among available alternatives in order to achieve goals, solve problems, and improve outcomes.

# Decision making process:

**Step 1: Identifying a problem.**

**Step 2: Identifying decision criteria.**

**Step 3: Allocating weights to the criteria.**

**Step 4: Developing alternatives.**

**Step 5: Analyzing alternatives.**

**Step 6: Selecting an alternative.**

**Step 7: Implementing alternative.**

**Step 8: Evaluating decision effectiveness.**

# Factors affecting decision making:

- The perception of the problem can be influenced by External and Internal factors.
- **External factors** includes environmental conditions, and time.
- **Internal factors** includes decision maker's physical and emotional state; personal characteristics; culture, social, and philosophical background; past experiences; interests, knowledge, and attitudes. Personality factors such as self-esteem, and self-confidence affect whether one is willing to take risk in solving problems or making decisions.

# Decision making styles:

# Directive Style:

-Directive types make fast decision and focus on the short run. Their efficiency and speed in making decisions often result in their making decisions with **minimal information** and **assessing few alternatives**.

# Analytical Style

- Decision maker with an analytical style have much greater tolerance for ambiguity than do directive styles. They want more information before making a decision and consider more alternatives than a directive style - decision maker does. Analytic decision maker are best characterized as careful decision makers with the ability to adapt or cope with unique situations.

## **Conceptual Style:**

**- Individuals with a conceptual style tend to be very broad in their outlook and will look at many alternatives. They focus on the long run and are very good at finding creative solutions to problems.**

**Adapt or cope with unique situations.**

# Behavioral Style

- **Decision makers with a behavioral style work well with others. They are concerned about the achievement of subordinates and are receptive to suggestions from others. They often use meetings to communicate, although they try to avoid conflict. Acceptance by others is important to this decision-making style.**

# Time Management

- **Provide Participants with Knowledge, Skills And & Positive Attitude Toward time management .**

# OBJECTIVE

TEXTSTUDIO

- At the end of this lecture, all participants will be able to:

- 1-Define time management

- 2-List importance of time management

- 3-Define time wasters

- 4-Differentiate between internal and external time wasters

- 5-Discuss nurse manager role in time management

# outline

# Definition of time management:

- **Time management** is managing time effectively so that the right time is allocated to the right activity.
- **Time management** is making an optimal use of available time for maximum productivity.

# Importance of time management:

- 1- Time is limited.**
- 2- Accomplish more with less effort.**
- 3- Make better decisions.**
- 4- Be more successful.**
- 5- Learn more.**
- 6- Reduce stress.**
- 7- Gain extra productive hours.**
- 8- Increase efficiency and productivity.**
- 9- Have more control over your life.**
- 10- Spend more time for enjoyment.**

# Principles of time management

## 1-Clarity of purpose:

- To use your time effectively, you must determine what you want to use it for.

## 2-Evaluate your current use of time:

- It's important to identify patterns of procrastination and avoidance that negatively impact your ability to move forward with your goals.

# Cont.

## 3-Create a written plan for your daily and weekly activities:

- Plan to succeed by charting your daily and weekly activities.
- This enables you to deal with all the items on it without the distraction of new work being added

## 4- Prioritize your activities:

- Make sure that you have accurately assessed what your top priorities are.
- Activities related to achieving your goals must receive your attention first.

# Cont.

## 5-Place boundaries on your time wasters:

- To effectively use your time, you need to be aware of where your weaknesses are. What are your time wasters?
- Identify causes of interruptions, and plan to reduce them.

## 6-One thing at a time:

- Current research shows us that multi-tasking is a myth. In actuality we are switching back and forth between tasks.
- With each switch we pay a cognitive cost and a time cost. It takes time to get mentally back into the task; this makes us less efficient.

# Cont.

## 7- Delegation:

- Is a time management tool that involves assigning tasks and transferring responsibility to another individual.

## 8- Evaluation:

- The nurse manager should make at least a weekly assessment of how effectively time has been used.

# Definition of time waster

- It is something that prevents a person from accomplishing a job or achieving a goal.

# Classifications of time wasters:

## A- Internal time wasters: (Personal time wasters- Self)

**These are the things that you do yourself to waste time and are the easiest to control.**

- 1-Lack of planning and priorities.**
- 2-Disorganization.**
- 3-Procrastination.**
- 4-Perfectionism.**

## B- External time wasters

**These are the things other people do to waste your time. This can be more difficult to control.**

- 1-Telephone calls.**
- 2- Drop in visitors.**
- 3-Poor filing system.**
- 4-Paper work.**

# **Nurse manager role in time management:**

- 1. Is self-aware regarding personal blocks and barriers to efficient time.**
- 2. Function as a role model, support, and resource person to subordinates in setting priorities.**
- 3. Assists followers in working cooperatively to maximize time use.**
- 4. Appropriately priorities day-to-day planning to meet short-term and long-term unit goal.**
- 5. Builds time for planning into the work place.**
- 6. Analyzes how time is managed on the unit level using job analysis and time motion studies.**

# Organizing

- **To achieve integrated acquisition of knowledge, skills, and positive attitude toward organizing.**

# OBJECTIVE

TEXTSTUDIO

- At the end of this lecture, all participants will be able to:
- Identify organizing, organization and organizing process.
- Steps in the process of organizing.
- Discuss Importance of organizing.
- List principles of organizing.
- Apply organizing as per nursing manager role.

# outline

- **key concepts.**
- **Importance of organizing**
- **Steps in the process of organizing.**
- **principles of organizing:**
  - **Chain of command.**
  - **Unity of command.**
  - **Span of control.**
  - **Delegation of authority.**
  - **Departmentalization.**
  - **Specialization.**
- **Delegation.**
- **Role of the nurse manager in organizing.**

# Definitions: -

- **Organizing:** is the process of determining the activities to be performed, arranging these activities to administrative units, as well as assigning managerial authority and responsibilities to people employed in the organization.
- **Organizing:** is the process of deciding the necessary levels of organization needed to accomplish the objectives of a nursing division, department, or service and unit.

# Definitions: -

- **Organizing process:** refers to identifying and grouping of activities to be performed, defining and delegating authority, casting responsibility and establishing relationships to enable people to work together effectively in accomplishing objectives.

# Importance of organizing:

- **Focus on objectives and facilitate the attaining of objectives.**
- **Arrangement of positions and jobs within the hierarchy.**
- **Clearly define responsibilities and line of authority of all levels.**
- **Creating relationships that will minimize friction.**

# Steps in the process of organizing:

- The process of organizing consists of the following steps:

1. Determining the activities to be performed to achieve the objectives of the organization.
2. Identification of major functions to which these activities relate.
3. Grouping and sub-dividing the activities within each function on the basis of similarity or relatedness.
4. Establishing relationship among individuals and groups.

# Principles of organizing: -

- 1. Chain of command.**
- 2. Unity of command.**
- 3. Span of control.**
- 4. Delegation of authority.**
- 5. Departmentalization.**
- 6. Specialization.**

# Cont.

**1-Chain of command:** the formal path of communication and authority.

**2-Unity of command:** One person/one boss, each person has one manager to whom they are responsible.

# Cont.

**3-Span of control:** also known as span of authority, span of supervision, or span of management.

- This concept deals with the scope of supervision, the number of subordinates that can be adequately supervised by one supervisor.

# Cont.

- **Dimensions of span of control**

- A. Narrow span of control:**

**In which the manager supervises a small number of workers.**

- B. Wide span of control:**

**The manager supervises a large number of workers.**

## Cont. Principles of organizing: -

### 4-Delegation of authority:

- **Delegation:** is the process of assigning work from a top organizational level to a lower one or from superior to subordinate and giving that person the authority to accomplish them.

# Delegation process:

- 1. The allocation of duties.**
- 2. The delegation of authority.**
- 3. The assignment of responsibility.**
- 4. Creation of accountability, i.e., subordinates must be held answerable to properly carry out their duties.**

# Main principles of delegation:

- **Responsibility cannot be delegated.**
- **Authority and responsibility should be in equal proportion.**

# Factors affecting authority is delegation:

There are many factors that the manager should consider when he/she decide to delegate:

- A. Organization's size:**
- B. Importance of duty or decision:**
- C. Task complexity:**
- D. Qualities of subordinates:**

# Authority:

- Is the right to take final decisions, to act or to command action of others. It moves in a downward direction.
- **Types of authority:**
- **A. Ultimate authority:**
- **B. Legal authority:**
- **C. Technical authority:**
- **D. Operational authority:**

## Cont.

### **A. Ultimate authority:**

It deals with the original source from which one derives the right to take actions. Thus, in the health sector, the ministry of health has ultimate authority.

### **B. Legal authority:**

Means that an individual is legally permitted by the virtue of the position to take an action; a hospital director delegates to director of nursing service to act on behalf of the department.

### **C. Technical authority:**

It refers to a person who is a recognized expert in some particular field. This does not necessarily mean that it is derived from position.

### **D. Operational authority:**

Is giving someone permission to assure certain responsibilities through delegation of authority.

# Cont. Principles of organizing: -

- **Departmentation:**
- It is the process of grouping activities into administrative units.

# Types of Departmentation:

1. **Departmentation by services: i.e. medical, surgical**
2. **Departmentation by time: twenty-four hours a day**
3. **Departmentation by degree of acuteness of illness of the patients: i.e. Intensive Care Unit, Intermediate Care Unit,**
4. **Departmentation by function: e.g. laundry, pharmacy, dietary services.**
5. **Departmentation by location: , i.e. inpatient department, outpatient department**
6. **Departmentation by patient: i.e. sex: male, female, age: geriatric, pediatric, economic status: paying, free unit.**

# Cont. Principles of organizing: -

- **Specialization:**
- The principle of specialization is that person should perform a single leading function. Thus, there is a division of labor, differentiation among kinds and duties.

# Budgets

- **To achieve integrated acquisition of knowledge, skills, and positive attitude toward. budget as an important aspect in management process.**

# OBJECTIVE

TEXTSTUDIO

- At the end of this lecture, all participants will be able to:
- Define budget.
- Discuss purposes of budget.
- Plan steps of budgetary process.
- Estimate characteristics of an effective budget.
- Describe system for budget development.
- Differentiate between types of budget.
- Have positive attitude toward budget as an important aspect in management process.

# Definitions of key terms:

- **Budget:** It is a numerical description of expected income and planned expenditures for an organization for a specified period of time.

**Budgeting:** Primarily, the activity of preparing a budget is called budgeting. In many organizations, it is a separate department taking care of only the preparation and implementation of budgets.

# Purposes of the budget:

- 1- To set operating cost limits; it quantifies plans.**
- 2-The budget can be a powerful instrument since it serves as a guide for nursing performance.**
- 3- Helps in allocation of personnel, supplies, supports services, and facilities.**

# Functions of budgets:

**1-Planning:**

**2-Coordination:**

**3-Motivation:**

**4-Control:**

**5-Communication:**

# Risks of not budgeting:

- 1. Not having an emergency fund**
- 2. An inability to expand operations or expand into a new market**
- 3. Not being able to secure investment dollars**
- 4. Potentially shutting down the company because it can not get out of debt**
- 5. Not making long-term commitments to customers, clients, vendors or suppliers, thereby straining business relationships**
- 6. An inability to secure loans or to make a large purchase that's necessary for the business.**

# Steps in the budgetary process:

# Characteristics of an effective budget:

- **The effective budget should be:**
  - 1. Based on the organizational objectives and standards.**
  - 2. Simple, flexible, balanced and economic.**
  - 3. Fair & objective.**
  - 4. Based on controllable factors.**
  - 5. Outcome oriented.**

# Types of budgets

# Cont.

## 1-Personnel budget:

- **Personnel budget is the largest budget in healthcare because it is labor-intensive, and it includes both productive time (actual working hours) and non-productive time (paid time not worked such as breaks, benefits, and leave), which must be closely monitored to avoid under- or over-staffing.**

# Cont.

## 2-Operating budget:

- It reflects expenses that change in response to the volume of service. Included in this budget are such daily expenses as the cost of electricity, repair, maintenance & supplies.

## 3-Capital budget:

- Capital budgets plan for purchase of buildings or major equipment, which include equipment that has a long life (usually greater than five to seven years).

# Cont.

## 4-Cash budget:

- **It is the life blood of any organization. It is important as the operating & capital budget.**
- **It is the operating plan for monthly cash receipts & disbursements.**  
**Organizational survival depends on an organization paying bills on time.**

# Motivation

- **Provide Participants with Knowledge, Skills And & Positive Attitude Toward motivation.**

# OBJECTIVE

TEXTSTUDIO

- At the end of this lecture, all participants will be able to:

1. Define motivation.
2. Differentiate between types of motivation.
3. Apply motivation in our work & life.
4. Have a positive attitude towards motivation.

# Definition of Motivation

- is the power and direction of behaviour and factors that influence human behaviour in certain ways.
- It is the individual internal process that energizes, directs, and sustains behavior; the personal "force" that causes us to behave in a particular way.
- The extent to which persistent effort is directed toward a goal.

## **So, motivation:**

- Energizes people to act
- Moves you from a resting state to an active state.
- Directs behaviour & organizes it towards a particular goal-state.
- Maintains behaviour until the goal is achieved.

# Why to Motivate?

- 1 To drive individuals to achieve.
2. To help individuals work more efficiently.
3. To build morale.
4. To help individuals produce better results.

# Motivation as a process:

It is a process by which a person's efforts are energized, directed and sustained towards attaining the goal.

## Types of motivations:

- **Extrinsic:**

1. Bounces.   2. Use of company car.   3. Gift certificates.   4. Training opportunities.

- **Intrinsic:**

1. Are specific to individual.  
2. Personal satisfaction.  
3 Cultural and religious.

# The effects of motivation on work:

## 1. Working condition:

Working conditions that increase job involvement, motivation, and satisfaction include:

1. Work provides a sense of meaningfulness.
2. Employees have control over part of work.
3. Tasks are varied.
- 4 Company maintains clear and consistent rules.
- 5 Employees have supportive relationships with superiors and co-workers.
- 6 Employees receive useful feedback.
7. Company offers opportunities for growth.

## 2. Opportunities to achieve:

When person lacks fair chance to make it, he or she may be less than successful.

# How to motivate?

- 1 Identify individual's type (extrinsic, intrinsic).
2. Empower to participate in project plan (team building).
3. Communicate the goals of the project.
4. Assign responsibility.
5. Perks such as gift certificates, "employee of month", "Great job", "well done".

# Motivation strategies:

Motivational strategies to create a workplace and to develop policies and practices that will higher levels of employee performance. These include the growth of the total reward system and performance management process, design motivational and leadership development programs.

# Nursing Recording and reporting

Dr/ Shaimaa Salah Abo Shama  
Lecturer of Nursing Administration  
Faculty of Nursing – Helwan University

2025

To embrace students with knowledge, skills & positive attitude toward Nursing Recording and reporting.

# OBJECTIVE

TEXTSTUDIO

At the end of this lecture, students will be able to:

# Outlines

- Define key terms
- Enumerate characteristics of good recording and reporting
- List purposes of recording and reporting
- Explain types of records
- Enumerate principles of record writing
- Discuss methods of recording
- Discuss types of reporting
- List role of administrator

# Introduction

Nursing documentation is a vital component of safe, ethical and effective nursing practice, regardless of the context of practice or whether the documentation is paper-based or electronic. This document is intended to provide registered nurses (RNs) with guidelines for professional accountability in documentation and to describe the expectant for nursing documentation in all practice settings, regardless of the method or storage of that documentation. The main aim of the document is to assist the registered nurse to meet their standards of practice related to documentation.

# Definition of documentation

Documentation is the permanent recording of information properly identified as to time, place, circumstances and attribution.

Documentation is the written, legal record of all pertinent interactions with the client-assessing, diagnosing, planning, implementing and evaluating.

# Definitions.

## Recording:

To write (something) down so that it can be used or seen again in the future; to produce a record of (something).

## Reporting:

It is oral, written or computerized based communication intended to convey information.

# Characteristics of good Recording and Reporting:

- 1-Accuracy: Information should be correct to prevent serious mistakes.
- 2-Conciseness: Use a few words as possible to give the necessary information.
- 3-Thoroughness: Even a concise record or report must contain complete information.
- 4-Up to date: Recording should be done on time.
- 5-Organization: Communicate all the information in a logical format or order.
- 6-Confidentiality: The information should be confidential.
- 7-Objectivity: Presentation of facts not personal feelings, to give true picture.

## Purposes of recording and reporting:

1. Decision Making.
2. Communication
4. Legal accountability.
5. Education
6. Assessment.
7. Planning.
8. Research.
10. Historical document.
11. Quality assurance.
12. Vital statistics.
13. Health service planning.
14. Diagnostic and the therapeutic orders.
15. Accrediting and licensing.

## Types of records:

1. Ward records
2. Nurses' records.
3. Education records.
4. Administrative records.

# 1. Ward records

## 1. Patients clinical record:

It includes outpatient records and inpatient records.

## 2. Doctor order sheet:

Doctors' order regarding treatments, medications, investigation, and diet may be written on separate sheets.

## 3. Reports of laboratory examination:

Normal values included in this for evaluating abnormalities.

# Cont.,

## 4. Diet sheet:

It includes type of diet depends on the patient's diagnosis. E.g., for diabetic patient sugar free diet.

## 5. Consent form for operations and anesthesia:

Before going to do any treatment or surgery consent to be taken from the patient or any responsible person from the patient side.

## 6. Intake and output chart:

Intake of the patient includes IV fluids, oral fluids, Ryle tube feedings, gastrostomy tube feedings. I/O chart maintained in clients with critical illness, diarrhea, diuretics, after surgery.

## Cont.,

7. Reports of physiotherapy, occupational therapy

8. Kardexes, SBAR, ISBAR.

9. Instruction Book:

The doctors give special instant instructions when any incident happens suddenly during rounds.

10. Admission and discharge record:

Record the name, age, sex, address of the client, date and time of the admission, diagnosis of the client. It gives the record of total number of admissions per day.

# Cont.,

## 11. Census Record:

It includes the total number of admissions, discharges, transfer-ins, transfer-outs, absconding and deaths of the client.

## 12. Call Book:

It includes the name of the doctor, date, time and purpose of the call-in emergency situations.

## 13. Complaint book:

It consists of any repairs in the ward like machinery, electricity and water supply.

# Cont.,

## 14. Movement register:

It gives the information regarding the availability of doctor and nurse concerned. E.g. place where they are available at that particular time.

## 15. Indent book:

The total number of linens, medicines, IV fluids, cotton, and gauze is indented for the patient care.

## 16. Drug's maintenance register:

The prescription and supply of drugs generates a variety of records including pharmacy stock ordering, dispensing records, request for drugs from stores, drug administration records, prescription for individual patients, the receipt and issue of all drugs should be recorded.

## 2-Nurses records:

- The office of the chief nurse will generate records of the type found in the office with an executive or administrative function: correspondence, reports, minute of meetings.

## 3-Educational records:

- The officers, boards and committee of medical and nursing schools will produce their own records, minutes, correspondence, reports and so on.

## 4-Administrative records in nursing superintendent's office:

Hospitals also requires records relating to finance, personnel, building, accommodation, stores and other such services, although they will be little different from those used in non-medical organizations of equivalent size.

1. Philosophy, purposes and curriculum.
2. Course, content and course plan record for each subject.
3. Rotation plan for duties of staff nurses.
4. Record of committee.
5. Record of academic requirement.
6. Stock register.
7. Annual reports.
8. Affiliation records.
9. Written policies.
10. Statement of budget proposal and allotments.
11. Copy of brochure.

## Principles of record writing:

### 1. Legal prudence:

Since the clinical record is a legal document and gives legal protection to the nurse, other health care professional of the institution, it is essential that they should be written clearly, accurately and confidentiality maintained.

### 2. Legibility:

Writing must be clear and easily readable by others.

### 3. Organizations:

Documentations on data collection should be organized in a local pattern, as the statement is more easily read.

# Cont.

4. All entries should be signed by the individual who writes them.

5. Records are written continuously:

With no blank spaces. If any space is left out, it should be crossed out, dated and signed.

6. Date and Sign:

When recording medications and treatments, note exact time and date on which they are carried out.

7. Accuracy:

Each page of the record should be properly identified with the name, age, I.P. No, Bed No, ward, date etc.

# Cont.

## 9. Sequence and timeliness:

Documentation on is the timely manner can help to avoid errors.

## 10. Completeness:

Record should be truthful and complete.

## 11. Correct spelling:

check the dictionary and use the correct spelling.

# Methods of recording:

1. Narrative charting
2. Source -oriented charting
3. Problem - oriented charting
4. PIE charting
5. Focus charting
6. Charting by exception
7. Graphic sheets and flow sheets:

# 1. Narrative charting:

It is a traditional method for recording nursing care provided. It is a story like format to document information specific to client conditions and nursing care.

## 2. Source -oriented charting:

Descriptive recording done by each member of health care team on separated parts. One of the most prominent features of this problem-orientated method of documentation is the structured way in which narrative progress notes are written by all health-care team members, using the SOAP, SOAPIE OR SOAPIER format.

# CONT.

**Subjective:** the client's observation.

**Objective:** the care provider's observations.

**Assessment:** the care providers understanding of the problem.

**Plans Goals:** The plan outlines the goals and interventions intended to meet the patient's needs.

**Intervention:** action, advice intervention when an intervention was identified and changed to meet client's needs. Intervention refers to the actions performed by the nurse to treat or manage the patient's problem.

**Evaluation:** how outcomes of care are evaluated.

**Revision:** when changes to the original problem come from revised.

### 3. Problem - oriented charting:

- This is a method of documentation that places emphasis on client's problem. Here, each member of health team contributes to a single list of identified client problems.
- The **nursing process** forms the basis for the POMR method of documenting client's problems listed the advantages of this method of documenting are as follows:
  1. Gives emphasis to client's perceptions of their problems.
  2. Requires continuous evaluation and revision of the care plan.
  3. Provides greater continuity of care among health-care team members.
  4. Increases efficiency in gathering data.
  5. Reinforces use of the nursing process.

## 4. PIE charting:

- The key components of the system are assessment flow sheets and nurses progress notes with plan of care. The PIE notes are numbered according to the client problem. Resolved problems are dropped from daily documentation after the RNs review.

## 5. Focus charting:

- Focus charting is the method of identifying and organizing the narrative documentation of client's concerns. This method of documentation consists of notes that includes data, both subjective and objective; action or nursing interventions; and response of the client. The notes are structured according to clients' concerns.

## 6. Charting by exception (CBE) :

Is a charting method that requires nurse to record only deviation from established norms.

## 7. Graphic sheets and flow sheets:

Health care record entries should reflect the most recent assessment, as they are done, to ensure treatment decisions are based on accurate information. If documenting on a flow sheet or checklist, check marks may be used as long as it is clear who performed the assessment or intervention. The meaning of check mark or symbol used must be identified in the practice setting policy.

## Types of reporting:

- Reporting is the **verbal** or **written** communication of data regarding the client health status needs, treatments, outcomes and responses.
- Reporting facilitates clinical decision making, continuity of care and co-ordination among health team members.

# The reports used in hospital setting usually are:

1. Change - of - shift reports
2. Transfer reports.
3. Incident reports.

# Role of administrator:

- The nurse administrator should see that everybody is following common guidelines for recording information:
  - Information recorded is true and complete.
  - Entries should be legible and written in ink.
  - Only facts should be recorded.
  - Entries should be brief, accurate, legible and correctly spelt.
  - If item error is made while written, the nurse should not erase or overwrite, instead draw a single line over it and sign it. Then note it down correctly.
  - Do not leave blank space in a note.
  - Should write in chronological order of date and time.
  - Each page of record should be properly identified with identification data.

# Summary

**ANY  
QUESTIONS?**

# Nursing Care Delivery System

2025

# Outlines

- ✓ Definition of nursing care delivery system.
- ✓ Purposes of nursing care delivery system
- ✓ Criteria of selecting the appropriate method of nursing care delivery system
- ✓ Principles of nursing care delivery system
- ✓ Characteristics of effective assignment
- ✓ Methods of assigning personnel

# Introduction

A nursing care delivery system, also known as a nursing care model or nursing care delivery model, refers to the organization and structure of how nursing care is provided to patients or clients within a healthcare setting. These systems are designed to ensure that patients receive appropriate and high-quality nursing care based on their individual needs, the resources available, and the goals of the healthcare facility.

## Definition Nursing care delivery system

The nursing care delivery system or assignment system in healthcare refers to the process of delegating specific nursing duties and responsibilities to trained staff nurses based on a variety of factors, including their knowledge, skills, job descriptions, and the unique nursing needs of patients or clients within a particular unit or care setting.

## Definition Nursing care delivery system cont.,

The care delivery system is actually a subsystem of the professional practice model that describes our approach to delivering patient care by:

1. Detailing assignments, responsibilities and authority to accomplish patient care;
2. Determining who is going to perform what tasks, who is responsible, and who makes decisions;
3. Matching number and type of caregivers to patient care needs.

# Purposes of nursing care delivery system

**Optimize the quality of patient care by organizing and structuring how care is provided.**

**To delegate the work to be done by nursing personnel**

**Provide a framework for ongoing quality improvement efforts through the evaluation of patient outcomes and the effectiveness of the system.**

**Suggest appropriate procedure for nursing care with maximum efficiency with minimum effort**

**Gain the cooperation of workers in the acceptance of work to be done**

**Serve as work plan**

# Criteria of selecting the appropriate method of nursing care delivery system

- The number, qualification, experience, and abilities of nurses
- The acuity of patients.
- The complexity of tasks to be completed.
- The availability of supplies and equipment.
- Nursing needs of each patient, and appropriate time required for care.
- Decision making, authority for nurses giving direct care
- Type of service rendered should be considered.

# Principles of nursing care delivery system

**Formulate  
assignment of  
activities  
based on the  
following  
principles:**

- Made by the **first line manger** based on nursing needs, competencies, and job description.
- Should be in **written form**
- Posted in a **place easily accessible** toward nurses
- Assignment should be made in **accordance with the administrative policies**
- Fix responsibility for all **duties clearly with no overlapping.**

# Principles of nursing care delivery system cont.,

**Formulate  
assignment  
of activities  
based on the  
following  
principles:**

- Related to **previous experience** of nursing personnel
- It must be **done weekly** and **adjusted daily** to meet changing patients' needs or changes in nursing personnel
- Two workers should never be assigned to do the same work
- Arrange the various parts of the assignment in **logical order**.

# Methods of assigning personnel

## Traditional methods

Case method

Functional method

Team nursing method

Primary care method

Modular method

## Advanced methods

Case management method

Clinical pathway

Patient centered care

**Traditional methods**

# 1- Case method (Total Patient Care)

- ☐ Is the oldest patient care delivery system.
- ☐ In this system one registered nurse (RN) is responsible for all aspects of care for one or more patient (1-6 patients) while she is on duty.
- ☐ Must assume total responsibility for the complete care of the patient
- ☐ The patient has different nurse in each shift
- ☐ Is used frequently in intensive care unit

# 1- Case method (Total Patient Care)

Advantage

Disadvantage

## **2- Functional nursing method**

- It is a task focus.
- Functional nursing is task-oriented method in which a particular nursing function is assigned to each staff member.
- Work assignment are divided into tasks and assigned to nursing and ancillary personnel.
- One registered nurse is responsible for administering medication; another for treatment; one licensed practical nurse is assigned for admission and discharge; a nurse aide makes beds, and so on.

## 2- Functional nursing method

Advantage

Disadvantage

### 3- Team nursing method

- Uses a group of health care workers with varied skills, and training.
- They are directed by a leader to provide total services for a defined patient population.
- Refer to large group of patients
- The team leader plans, coordinates and supervise, evaluation and participates in the delivery of care to patients.
- The team leader provide care requiring complex nursing skills, problems solve with physicians and members of other disciplines.

### 3- Team nursing method

Advantage

Disadvantage

## **4- Primary nursing method**

- Primary nursing features a registered nurse who gives total patient care from 4 to 6 patients, while she is on duty and remains responsible for the care of these patients twenty four hours a day during the patient's hospitalization from admission to discharge.

## 4- Primary nursing method

Advantage

Disadvantage

## 5- Modular method

- It is a combination of team method & primary method.
- It is similar to primary assignment in that each pair of nursing personnel is responsible for care of patient from admission to discharge.
- It is similar to team nursing that professional and non professional workers work together.
- The unit is divided into modules or districts and the team of staff members is assigned always to the module
- Each module ideally consists of at least one RN, one LPN, and one nursing assistant

## 5- Modular method

Advantage

Disadvantage

**Advanced methods**

# 1- Case management

- Case management is an approach to managing care that is designed to coordinate care, decrease costs, and promote access to appropriate and needed services.
- It is a clinical system that focuses on the achievement of client outcomes within effective and appropriate time frames and resources
- It focuses on the entire period of illness, crossing all settings in which the client receives care
- Is to assist clients to receive the services they need by linking clients with formal and informal helping service networks within a community and then to follow up to ensure that the client has actually received the resources and social services required

# Case Management

## 2. Clinical pathway

- A clinical pathway, also known as a care pathway or clinical guideline, is a multidisciplinary management tool used in healthcare to outline the **key steps** and **interventions** involved in the care of patients with a specific medical condition or undergoing a particular medical procedure. Clinical pathways are designed to ensure that healthcare providers follow evidence-based best practices and provide consistent, high-quality care to patients while optimizing resource utilization and minimizing variations in treatment.

### **3. Patient centered care**

- Patient-centered care is an approach to nursing care delivery that prioritizes the individual needs, preferences, and values of the patient. It places the patient at the center of the care process and involves them in decision-making, planning, and evaluating their own care. This approach recognizes that each patient is unique and should be treated as an individual with their own set of circumstances and goals.

## Patient centered care

# Evaluation of nursing care delivery models

**1. Timely, cost-effective outcomes achieved?**

**2. Patient and families happy with care?**

**3. Team members satisfied with care?**

**4. Good communication among all team members?**

**5. RNs utilized and challenged appropriately?**

# Summary

---

③

A person in a dark suit and tie is shown from the chest up, holding a glowing, rectangular box with the text "ANY QUESTIONS?". The box has a blue and white border and is tilted slightly. The person's right hand is open, palm up, holding the box. The background is dark and out of focus, showing a desk with a pen and a blue mug. Various digital icons are floating around the person, including a puzzle piece, a globe, a speech bubble, a padlock, and gears, all connected by thin, glowing lines.

**ANY  
QUESTIONS?**

## Directing

***Directing is a key  
managerial function***

# DIRECTING

**Introduction:**

- Directing is a management function which plays a pivotal role in ensuring that organizational plans are put into action through directing the work of subordinates by the managers. It encourages leadership, motivation, and communication techniques and emphasizes the human aspects of managing individuals and teams to carry out tasks and activities in alignment with the organization's overall strategy
- Directing is the initiation and maintenance of action toward the desired objectives which can be fostered by nursing administrators who desire to improve their directing activities. It is the process of applying the management plans to accomplish nursing objectives through telling subordinates what to do, so the manager must ensure that the subordinates know what to do, how to do, when to do and why they do it.

**Definition of directing:**

Directing is a crucial component of the management process of guiding, supervising, and influencing employees and resources within an organization to achieve its goals and objectives effectively and efficiently.

**Purpose of directing:**

To channel the behavior of all personnel to accomplish the organizations mission and objectives and helping them accomplish their own career objectives.

**Importance of directing:**

- Effective directing increases subordinates contributions to achievement of nursing management goals.
- Effective directing creates harmony between nursing management goals and nursing workers goals.
- Effective directing is the management functions where in the nurse manager acts as a facilitator and coach.

**Elements of directing:****1- Supervision:**

- Supervision involves providing guidance and direction to the work in order to achieve a certain purpose.

**2- Leadership:**

- Leadership plays an important role in directing, as it refer to influence others in a manner to do what the leader wants them to do. Leadership is about getting

people to understand and believe in the leader vision and to work with him to achieve his goals.

### **3-Motivation:**

- **Motivation is forces that inspire a person at work to intensify his willingness to use the best of his capability for achievement of specific objectives. Motivation refers to that process which excites people to work for attainment of the desired objective.**

- **It may be in the form of incentives like financial (such as bonus, commission etc.) or, non-financial (such as appreciation, growth etc.), or it could be positive or negative.**

### **Application of directing by the nurse manager:**

**1-Whatever the management level, the nurse manager apply directing through the following points according to their span of control.**

2- Lead the nursing personnel by using suitable leadership style.

3- Act as a role model.

4-Delegate authority down the line of the nursing hierarchy.

5-Supervise the nursing personnel during their work.

6- Create the environment that is conducive to work.

7- Use the method of assignment that appropriate to the patients' numbers, acuity level, and the nurses' competency level.

8- Supervise the communication flow in the organization.

9- Create a defined communication channels.

10- Resolve the nurses' conflict through using appropriate mechanism.

11- Create the learning experience that helps to improve the nurse performance.

### **Introduction:**

Controlling is one of the most basic functions of management, like planning, organizing, staffing, etc. Controlling is an important function, and without controlling management can't ensure the desired results.

### **Definition of controlling:**

Controlling is the process of monitoring activities to ensure that they are being accomplished as planned and correcting any significant variations.

### **Importance of controlling:**

- 1. Controlling motivates employees**
- 2. Controlling makes the efficient use of resources**
- 3. Controlling ensures coordination of action.**
- 4. Controlling helps in deciding the right judgment about the standards**
- 5. Controlling aids in the accomplishment of organizational goals**
- 6. Controlling helps in improving the performance of the employees**
- 7. Controlling helps in minimizing the errors**

### **Process of controlling:**

#### **1-Establishing standards:**

This means setting up of the target which needs to be achieved to meet organizational goals eventually. Standards indicate the criteria of performance. Standards can be set in both quantitative as well as qualitative terms. It is important that standards should be flexible enough to be modified whenever required. Standards should be **SMART** as:

**S**-Simply Expressed

**M**-Measurable

**A**- Attainable

**R**- Reasonable

**T**-Time bounded

#### **2-Measuring actual performance:**

- Managers must measure actual performance to determine any variations from standard.
- Three common sources of information frequently used by managers to measure

actual performance:

1. Personal observation
2. Oral reports
3. Written reports

- The actual performance of the employee is measured against the target. With the increasing levels of management, the measurement of performance becomes difficult.

### **3-Comparing measured performance to established standards:**

**A third step asks the manager to compare the measurement against the standard.**

A- This is an application asking a comparison between the what is and the what should be.

B- If the comparison results or measurements are acceptable, no action needs to be taken. If results show a trend away from the acceptable or show the unacceptable, action may be called for. The difference between what is and what should be is known as the deviation.

### **4-Taking corrective actions:**

- It is initiated by the manager who corrects any defects in actual performance. Controlling process regulates organization's activities, so that actual performance conforms to the standard plan. An effective control system enables managers to avoid circumstances which cause the organization's loss.

- The last step, taking corrective action, depends on three things: the standard,

the accuracy of the measurements that determined a deviation exists, and the diagnosis of the person or device investigating the cause for the deviation.

- Corrective actions can be prescribed by management in advance through policies, procedures, and practices Some corrective actions may be automatic Some corrective actions may have to take exception to established policy, procedure, or practices.

### **Examples of such corrective action might include:**

- Changing strategy.
- Changing structure.
- Training programs
- Redesigning jobs.
- Firing employees.

### **Types of controlling:**

#### **1-Feedback Control:**

This process involves collecting information about a finished task, assessing that information and improvising the same type of tasks in the future.

- These post-performance controls focus upon the end results of the process. The information obtained is used for corrective purposes. Adjustments and/or corrections follow the feedback input.

#### **2-Concurrent control:**

It is also called real-time control, in-process" or "steering controls. It checks any problem and examines it to take action before any loss is incurred.

#### **3-Predictive/feed forward control:**

- This type of control helps to foresee problem ahead of occurrence. Therefore, action can be taken before such a circumstance arises.
- In an ever-changing and complex environment, controlling forms an integral part of the organization.
- It is future directed: they are designed to detect and anticipate deviations from standards at various points. Such preventative controls focus on establishing conditions that will make it difficult or impossible for deviations from norms to

occur. Examples include job descriptions, job specifications, inductions, and orientation.

### Control Systems:

The composite Feedback, Concurrent, and feed forward control make up a "package" or "system." A system is a combination of any two or more controls.

### Characteristics of effective control system:

1. **Suitable:** The control system must be suitable to the needs of an organization.
2. **Simple:** The control system should be easy to understand and operate.
3. **Economic feasibility:** compares the costs to the benefits.
4. **Accuracy:** The information for the control must be useful and accurate.
5. **Forward Looking:** control system should be forward looking. It must provide timely information on deviations.

### Methods of controlling:

#### 1-Direct Supervision and Observation:

It is the oldest method of controlling. The supervisor himself observes the employees and their work. This brings him in direct contact with the workers.

#### 2-Financial Statements:

All organizations prepare profit and loss account. It gives a summary of the income and expenses for a specified period. They also prepare balance sheet, which shows the financial position of the organization at the end of the specified period. Financial statements are used to control the organization.

#### 3- Management by Objectives (MBO):

MBO facilitates planning and control. It must fulfill following requirements objectives for individuals are jointly fixed by the superior and the subordinate.

Periodic evaluation and regular feedback to evaluate individual performance.  
Achievement of objectives brings rewards to individuals

#### **4-Self-Control:**

Self-Control means self-directed control. A person is given freedom to set his own targets, evaluate his own performance and take corrective measures as and when required. Self-control is especially required for top level managers because they do not like external control.

#### **Role of nurse manager for controlling:**

- 1-Gave an employee a job performance evaluation.
2. Encourages followers to be actively involved in the control process.
3. Clearly communication expected standards of care to subordinator.
4. Uses control as a method of determining why goals were not met.
5. Support/actively participates in research efforts to identify and measure.
6. Accesses appropriate sources of information in data gathering for control.
7. Is politically active in communicating control.

## Staffing

### **Definition of Staffing:**

- Staffing is the process of ascertaining that adequate numbers and an appropriate mix of personnel are available to meet daily unit needs and organizational goals.
- It is the process of determining and assigning the right personnel with the right qualifications to the job in a right time to accomplish the purposes of the organization.

### **Goals of staffing:**

- Appropriate numbers and mix of nursing staff
- Delivery of effective and efficient nursing care
- Increase productivity
- Avoid role confusion, communication problems and time waste
- Maintain stability in team work
- Provide each nursing unit with an appropriate number of each category of worker to perform the nursing tasks required to give care and comfort to patients in the unit.

### **Factors affecting staffing:**

#### **1. Patient factors:**

- Patient type ( age , sex, diagnosis)
- Length of stay
- Complexity of care

#### **2. Staff factors :**

- Personnel policies (vacation , overtime, part time, work)
- Educational and experiential levels of staff

### 3. Environmental factors :

- Number of patients' beds
- Availability of supplies and equipment

### **Methods of calculating staffing:**

#### 1. **Patient classification system:**

- It is system developed to objectively determine workload requirements and staffing needs

#### 2. **Diagnostic related groups:**

- Based on the medical diagnosis of the patients

#### 3. **Acuity and complexity of care:**

- Estimate how many hours of nursing care will be needed during a particular shift.

#### 4. **Staffing formulas:**

- Must consider hours which coverage is required, vacations, holidays, absenteeism, and staff development time.

### **Manpower planning:**

Manpower planning may be defined as a strategy for the acquisition, utilization, improvement and preservation of the human resources of an organization. This involves ensuring that organization has enough of the right kind of people at the right time and also adjusting the requirements to the available supply.

### **The main objectives of manpower planning:**

1. Ensuring maximum utilization of the personnel
2. Assessing future requirements of the organization
3. Determining the recruitment sources.
4. Determining training requirements for management's development and organizational development.

### **Nursing Staffing Guidelines:**

- **Provide an all-professional nurse staff in critical care units, operating rooms, labor and emergency room.**
- **Provide sufficient staff to permit a 1:1 nurse- patient ratio for each shift in every critical care unit**
- **Staff the general medical, surgical, obstetrics and gynecology, pediatrics and Psychiatric units to achieve a 2:1 professional-practical nurse ratio.**
- **Provide sufficient nursing staff in general, medical, surgical, obstetrics and gynecology, pediatric and psychiatric units to permit a 1:5 nurse patient ratio on a day and afternoon shifts and 1:10 nurse patient ratio on night shift.**
- **Involve the heads of the nursing staffs and all nursing personnel in designing the department's overall staffing program.**
- **Post time schedules for all personnel at least eight weeks in advance.**
- **Reward employees for long term service by granting individuals special time requests on the basis of seniority.**

# Time Schedule.

# outline

- **Introduction.**
- **Importance of time scheduling.**
- **Principles of scheduling.**
- **Scheduling systems.**
- **Types of time scheduling.**
- **Tips for effectively handling a nurse's schedule.**
- **Pros and cons of working a nurse's schedule.**

## **Definition of Scheduling**

- **Is the planning pattern of on duty hours for employees in a particular unit for a given period. It is a timetable that shows planned workdays and shift for nursing personnel.**

## Definition of Time scheduling

- **Time scheduling** is essential for effective time management, as it helps individuals or organizations make the most efficient use of their available time.
- **Time scheduling** refers to a specific plan or timetable and organizing activities or tasks within a specific timeframe.

**Importance of  
time scheduling:**

- 1. Optimal patient care**
- 2. Workload balance**
- 3. Regulatory compliance**
- 4. Staffing efficiency**
- 5. Flexibility and adaptability**
- 6. Employee satisfaction and retention**
- 7. Collaboration and communication**

## Principles of Scheduling

- **Shift Needs:** Schedule planning should meet the needs of each shift.
- **Balance:** Schedules must balance the needs of patients and nursing personnel.
- **Organizational Goals:** Use organizational goals and patient classification tools to minimize understaffing and overstaffing.
- **Minimal Changes:** Keep changes to the schedule minimal.
- **Duty Assurance:** Ensure nurses' assigned shifts are stable unless emergencies arise.

## Cont.

- **Adequate Rest:** Avoid accumulation of days off to ensure adequate rest for staff.
- **Shift Overlap:** Provide overlap time between shifts for handovers.
- **Reporting Days:** Ensure head nurses have a day apart from their replacements for adequate reporting.
- **Night Shift Recovery:** Give a day off after night shifts.
- **Fairness:** Promote fairness and equity in rostering.
- **Rest Periods:** Ensure sufficient rest periods and breaks between shifts.

# Scheduling systems:

## **1- Centralized Scheduling:**

**Decision making occurs in a “centralized” location for the entire institution.**

## **2- Decentralized Scheduling:**

**Decision making occurs with the nurse manager on the unit. When managers are given authority and assume responsibility, they can staff their own units through decentralized scheduling.**

# Scheduling systems:

## **3- Mixed Scheduling:**

An individual may manage staffing but with the option of consulting a centralized office to help fill open shifts. Blends aspects of items 1 and 2. Individual units may manage staffing, but if they cannot fill open shifts, they might forward their needs to a centralized office.

## **4- Computerized scheduling**

Computerized scheduling in nursing, also known as automated or electronic scheduling, is a type of automated program that plans nursing shifts. Nursing managers can use this scheduling software to ensure the schedule is fair to nurses and meets all clinical needs.

# Types of time scheduling:

- **1- Block Scheduling:**
- Block scheduling involves assigning nurses to work consecutive shifts within a defined period, such as several days or weeks. Here are some key **characteristics** of block scheduling:
- **Consistent Shifts:** Nurses are assigned to a specific block of shifts, typically consisting of multiple consecutive days or weeks.
- **Predictability:** Block scheduling provides nurses with a predictable schedule, as they know in advance when they will be working and when they will have time off.

cont. **Types of time scheduling:**

## **2- Cyclic Scheduling:**

- **Cyclic scheduling involves rotating nurses through different shifts and work patterns over a predetermined cycle. Nurses are assigned to different shifts or work patterns following a predetermined cycle. This can include rotating through morning, evening, and night shifts, as well as different days of the week.**

cont. **Types of time scheduling:**

### **3- Self-Scheduling:**

- **In this type of scheduling system, the scheduling is coordinated by staff nurses. It saves the manager considerable scheduling time. This system also increases staff members' ability to negotiate with each other. Individual staff members schedule themselves. The nurse manager then works with staff members to fill empty slots. Nurses choose their shifts for the month within certain guidelines. They collaborate to ensure all shifts are covered. This method provides flexibility and often improves job satisfaction.**

cont. Types of time scheduling:

#### 4- On-Call Scheduling:

- **Nurses are scheduled to be available to work if needed but are not actively working unless called in. This type of scheduling is common for handling emergencies or unexpected staff shortages.**

cont. Types of time scheduling:

### 5- Pro Re Nata “PRN” shifts:

- PRN stands for *Pro Re Nata* – Latin for “as the **circumstance arises**”. This means nurses work as and when they are needed and don’t have a fixed schedule.
- It’s commonly used by hospitals or healthcare groups with multiple locations as nurses on a PRN schedule can be called in by any of the locations to address staffing shortages or short-term capacity challenges.
- It gives nurses who can’t work a full-time role more flexibility, gives nursing director during shortages. But it's unpredictable for nurses because they’re never certain of when they’ll be working, hard to plan ahead, and may reach out to someone and discover they’re unavailable at the requested time.

## Difference between On-Call Scheduling and PRN Shifts:

| Key Differences        | On-Call Nurses                                              | PRN Nurses                                                         |
|------------------------|-------------------------------------------------------------|--------------------------------------------------------------------|
| Commitment             | Scheduled obligation to be available during specific times. | Work only when they agree to take a shift.                         |
| Availability           | Ready to respond during designated times.                   | Flexible, work based on their availability.                        |
| Compensation Structure | Might receive standby pay plus regular pay when called in.  | Typically paid a higher hourly rate but only for the hours worked. |
