- Role of community health nurse in home health care.

Introduction

Home health care refers to all of the services or care provided to clients in their homes to maintain, restore, or promote their physical, mental and emotional health. Its purpose is to maximize the client's level of independence , minimize the effects of existing disabilities and decrease rehospitalization.

Definition

Home health care is a continuum of comprehensive healthcare whereby health services are provided to individuals and families in their places of residence for the purpose of promoting, maintaining and restoring health

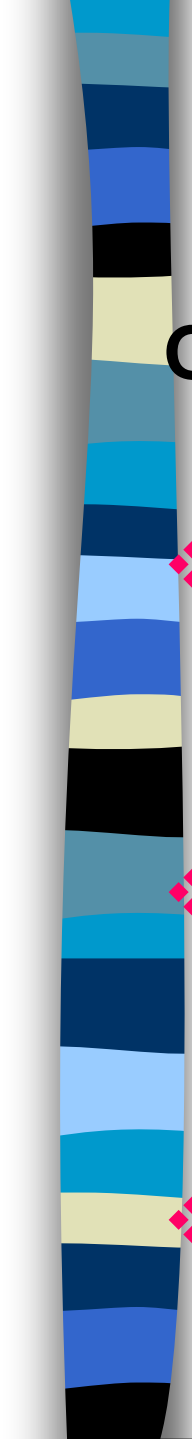

- **Home visit** is a family-nurse contact which allows the health worker to assess the home and family situations in order to provide the necessary nursing care and health related activities.

- **Home Health Nursing** is a specialized area of nursing practice in community health nursing. It involves the primary preventive focus on care of aggregates of community focuses on the care of individuals in collaboration with the family.

Home visiting programs

Goals for the home visit program can be grouped into:

- ❖ **Case finding and referral:**referred to appropriate sources of services to meet those needs.
- ❖ **Health promotion and illness prevention:** the primary focus of many visits made by community health nurse.
- ❖ **Care of sick:** to meeting the needs of the sick in their homes

Characteristics of successful home visiting programs

- Home visiting program requires a well-trained staff.
- should address multiple goals and should include long-term as well as short-term gains in health status.

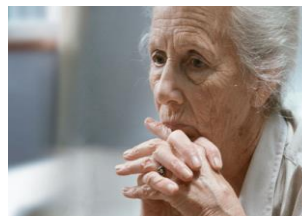

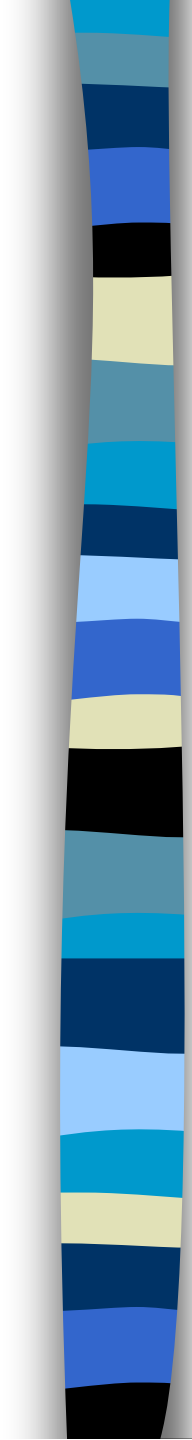

- should be toward personal goals
- should provide flexibility in the power and duration of services provided.
- Expected outcomes of home visiting program should be realistic.

Types of client who need home visit

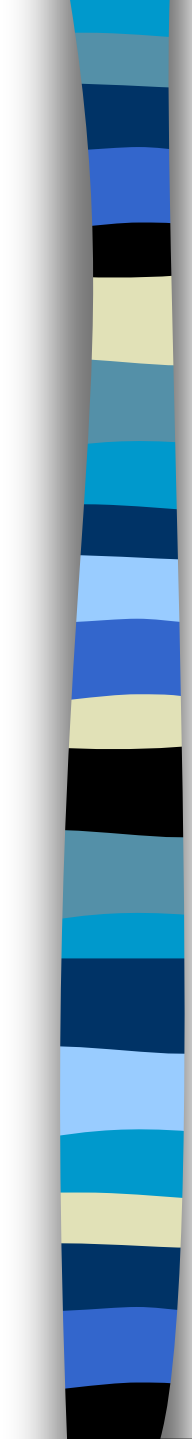

- Pregnant women
- Mother & newborn (post partum care)
- The elderly person requiring skilled care (after surgery for a hip fracture or chronic disease or handicap)
- Adolescent with uncontrolled diabetes.
- Children with health problems

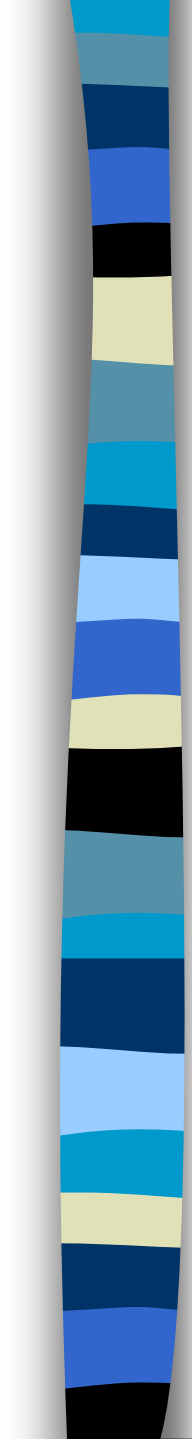

Steps in conducting home visits

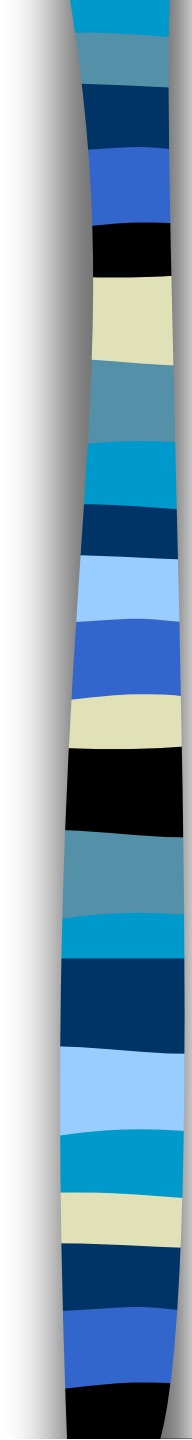

- introduce your self
- Greet the client of the visit
- Observe the client and determine the health needs.
- Put the bag in a convenient place.
- Perform the nursing care needed and give health teachings.
- Record all important data & observation.
- Determine time for a return visit.

Purpose of home visits

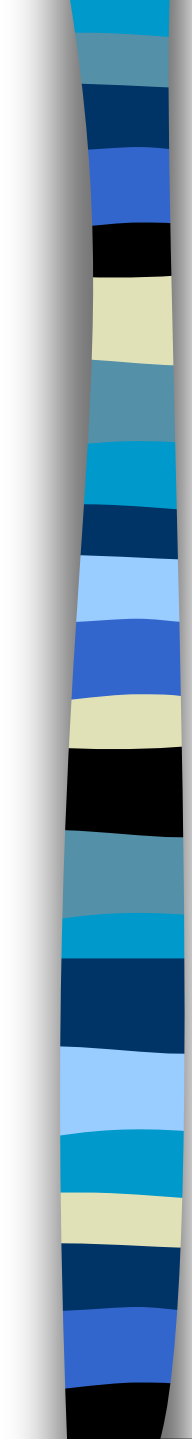

- Provide effective health care.
- Give more accurate assessment of the family structure, home environment and behavior in that environment.
- Meeting the families in their homes to give them chance of asking questions.

- 
- Promote active participation of the families in meeting their health needs.
 - Assessment risk factor that may affect the health
 - Promotion of a healthful environment.

Advantages of home visits

- the family is seen in a familiar atmosphere which is more relaxed and makes communication easier than at hospital or clinic
- High risk families can be identified & visited as a priority
- More accurate assessment is done
- Better understanding & good relationship is established with the family members.

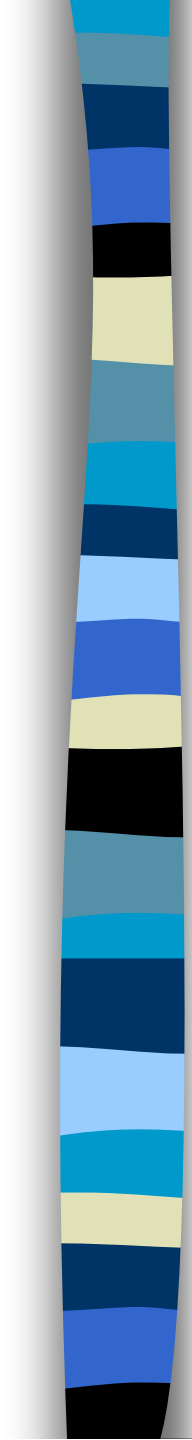

- 
- CHN can provide health care to the clients who do not have access to the other health care settings for any reason.
 - Advice will be practical to the family's needs
 - The nurse can be better assess the client's ability to perform activities of daily living.
 - The nurse is better able to evaluate the effect of interventions

Disadvantage of home visit:

Costs are major disadvantage,

For the following :

- **Pre-visit preparation.**
- **Travel to and from the home.**
- **Time spent with one client.**
- **Post- visit preparation.**

Phases of Home Visit (Component)

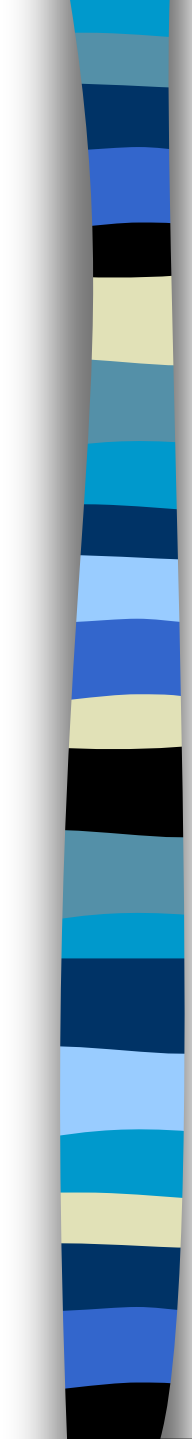

1. **Initiation phase**
2. **Pre-visit phase**
3. ***In-home phase (actual phase)***
4. ***Termination phase***
5. ***Post-visit phase***

Initiation phase

Nurses' tasks in initiation phase

- Clarify source of referral for visit
- Clarify purpose for home visit with the family
- Share information on reason and purpose of home visit with the family

Pre-visit phase

Nurses' tasks in Pre-visit phase

- Initiate contact with the family
- Establish shared perception of the purpose with the family
- Put schedule of home visit

In-home phase (actual phase)

Nurses' tasks in in-home phase

- Establish nurse client relationship
- Implement nursing care

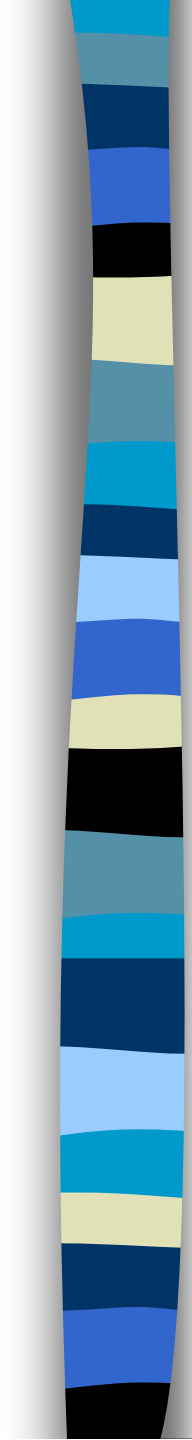

Termination phase

Nurses' tasks in termination phase

- Review the visit with family
- Plan for time of future visits

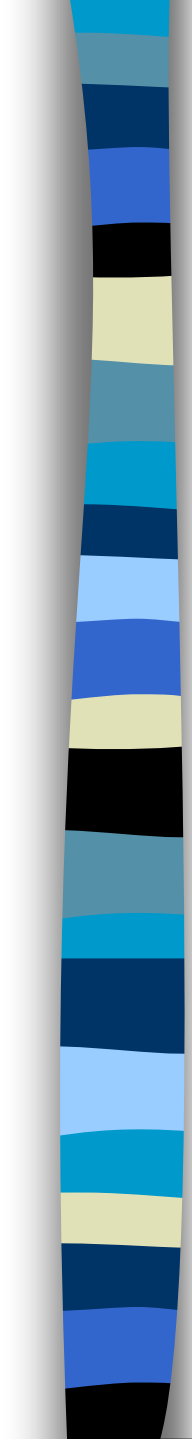

Post-visit phase

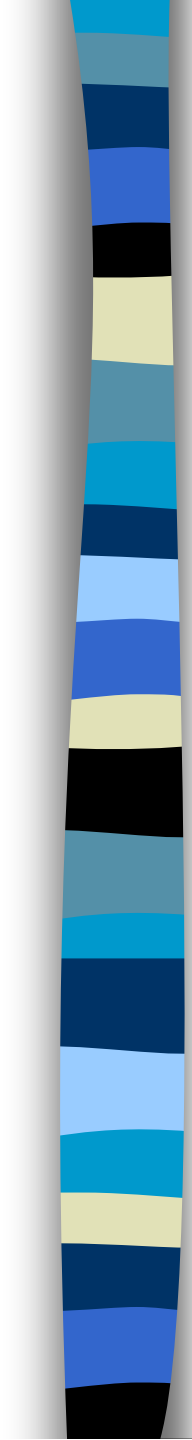

Nurses' tasks in Post-visit phase

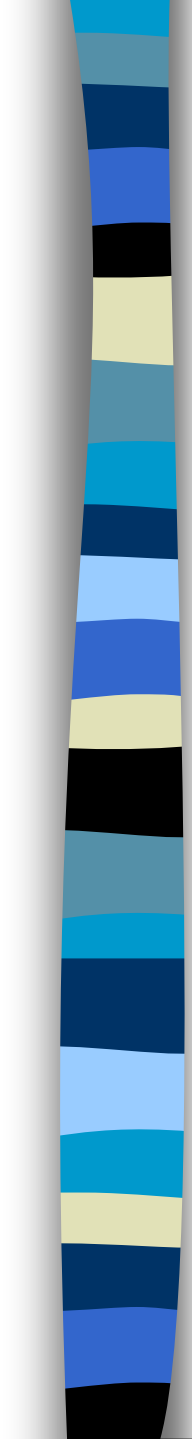

- Record visit
- Plan for contents of next visit

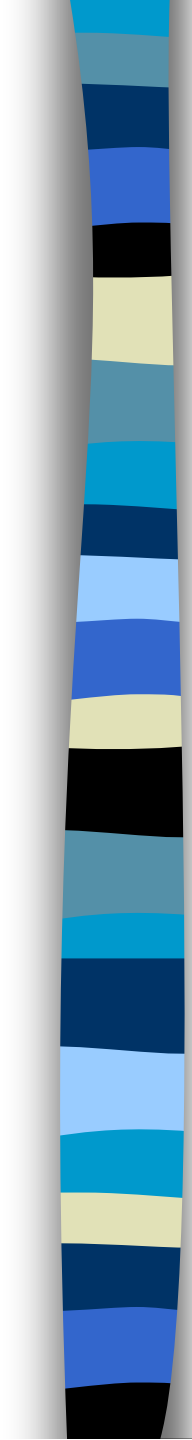

Standard precautions during home visit

- Use appropriate barrier precautions (e.g., gloves) to prevent skin and mucous membrane exposure when contact with human blood or other body fluids or contaminated items .
- Wash hands and other skin surfaces immediately after contamination with blood or other body fluids.

- 
- Take precautions to prevent injuries from needles and other instruments during or after procedures, when disposing of used equipment, or when cleaning used equipments.
 - Wear a mask, eye protection and face shield to prevent infection.
 - Change gloves after each contact with a client and between clients.

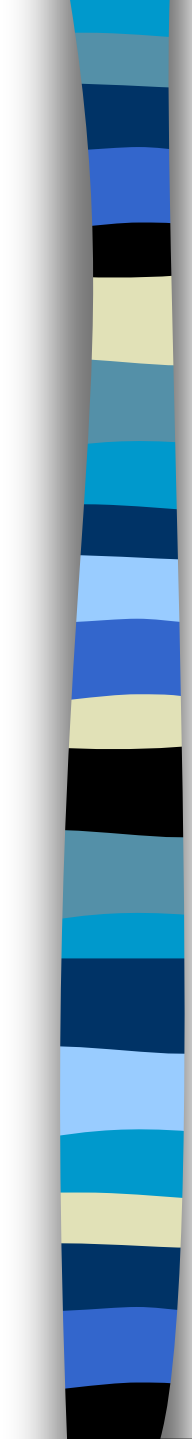

- 
- Wash hands after removing gloves to prevent transfer of microorganisms between clients.
 - Wear a gown or apron when giving nursing care to client.
 - Clean equipment after use for client.
 - Discard disposable single-use items probably

Role of community health nurse in home health care

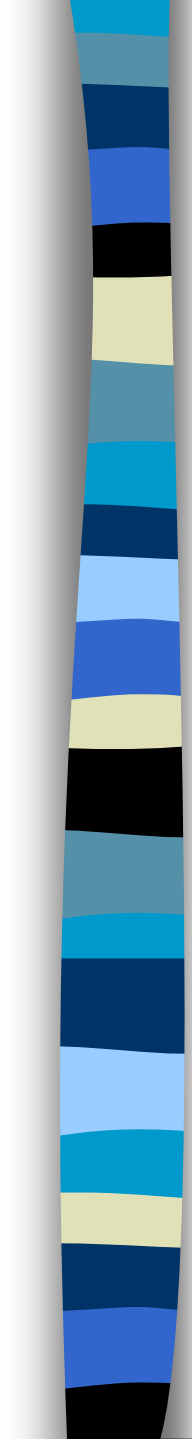

A. Direct care

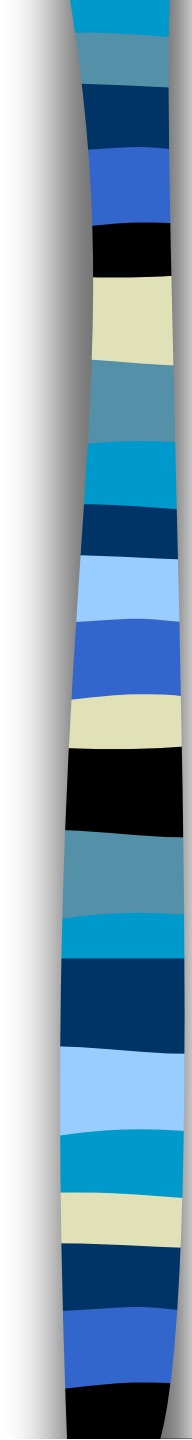

providing direct care in administering medications, catheter insertion, wound care, measuring blood sugar , measuring vital signs& rehabilitative exercises.

B.Client Education

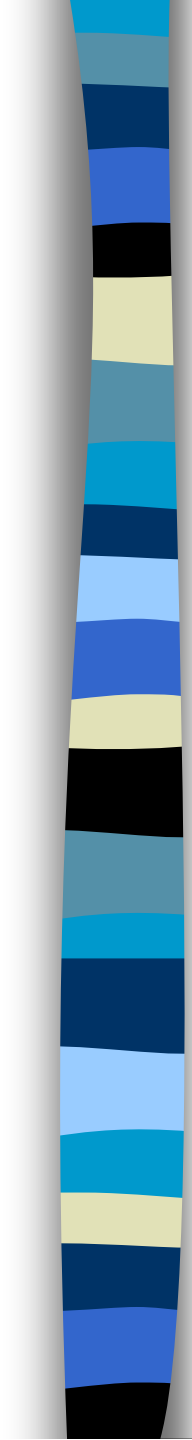

- Eating balance nutrition& safety food
- Hygiene care
- Healthy habits(avoid smoking ,alcohol, tea & coffee)
- Healthy environment & sanitation
- Measures to prevent infection
- Protection against the diseases
- Provide necessary information and skills to effective care .

- 
- Family members should maintain personal cleanliness by washing their hands before and after using the bathroom and before handling food. Family members should wash their hands before and after giving patient care. Keep the patient as clean as possible.
 - They are educating the clients and families how to perform self-care.
 - Nurses are responsible for providing the client and family with the necessary information and skills to provide safe and effective care

C- Supervision of services and case management

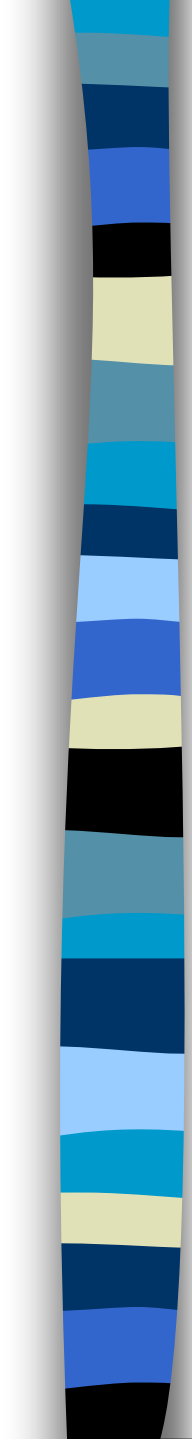

- The home care nurse is responsible for coordination of the other professionals involved in client's care
- The home care nurse must be knowledgeable about the many community resources existing to meet the needs of clients in their home.

D -Researcher

The researcher role in home health care is increasing in importance as the efficacy, or quality and cost effectiveness of care.

Research must be a priority in the future because quality and cost effectiveness are to be maintained.

E- Documentation

- The purpose of documentation is to convey clinical course of care for the client.
- The written record is the basis for planning individualized care and serves to communicate information to all health professionals involved in the client's care

Thank you
